

HEPEX future

HEPEX goal (revised at WS 2) is:

To bring the international hydrological and meteorological communities together to demonstrate how to produce reliable hydrological ensemble forecasts to make decisions for the benefit of public health and safety, the economy and the environment.

- *Shall we revise the HEPEX goal?*
- *Shall we say more on how we are going to achieve it?*

HEPEX future

- *Shall we add a page on the HEPEX web page with relevant bibliography?*
- *HEPEX group could start to compare models/downscaling methods on the test-beds, with test-bed responsible people providing access to the obs/verification data*
- *Shall we add more test-beds?*
- *Shall we add links with end-users to increase reciprocal understanding?*
- *Shall we write a document of the relevance of re-forecasts?*
- *Shall HEPEX organize an educational WS to convince the end-users of the value of M/H-EPS fcs?*
- *When are we going to meet next?*
- *Shall the next meeting focus on downscaling?*
