## SPECS

Seasonal-to-decadal climate Prediction for the  
improvement of European Climate Services

*SPECS aims to identify the main problems in climate prediction  
and investigate a battery of solutions  
from a seamless perspective*

# 2003 and 2010 heat waves

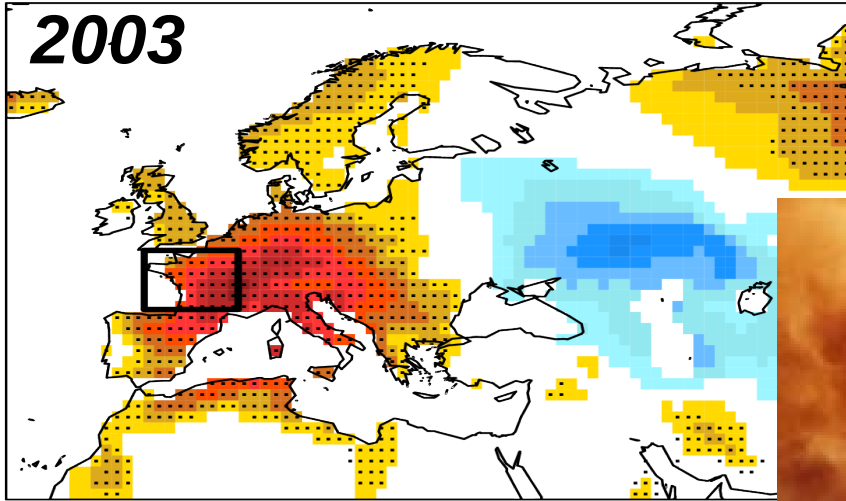

Barcelona  
Supercomputing  
Center  
Centro Nacional de Supercomputación

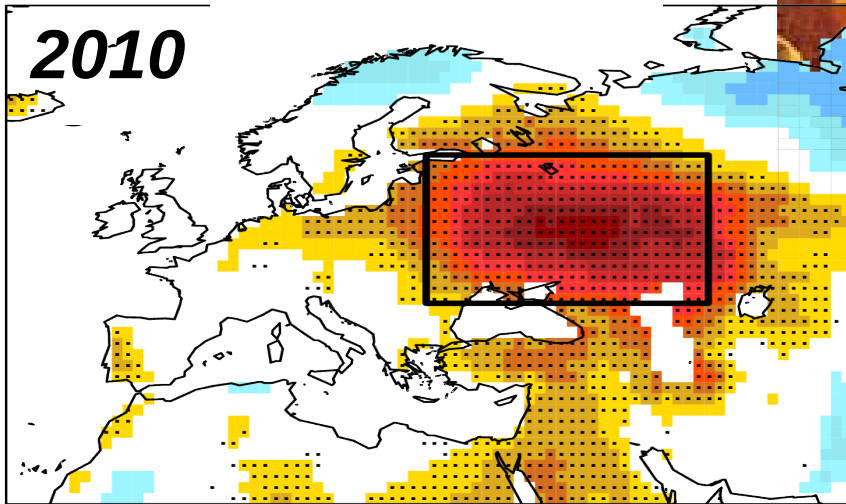

## 2m-Temperature anomalies

2003

2010

The European heat-wave of 2003 caused the death of 35,000 people and damages of \$15 billion.

# Land – atmosphere coupling

- **Both 2003 and 2010 heat waves were predictable.**
- **2003 seems to be mainly large scale driven.**
- **Realistic dry soil initial conditions are necessary to reproduce the 2010 heat wave 2-3 month ahead.**
- **August 2010 temperature was highly sensitive to soil conditions.**

*Prodhomme C., Doblus-Reyes F., Bellprat O., Dutra E., 2015: Impact of land-surface initialization on sub-seasonal to seasonal forecasts over Europe. Clim. Dyn., Under Minor Revision*
